

Shanti Ayush Multispeciality Hospital (fictional facility — sample only)

Plot 14, Sector 21, Ring Road, Nashik, Maharashtra 422101 | Reg. No. (fictional): MH/HOSP/2014/00981 | Ph: 0253-000-1234 | Not a real institution

MEDICAL REPORT / OUTPATIENT CONSULTATION

Patient Name:	Sunita Ramesh Joshi (fictional)	UHID No.:	SAH/2026/003512
Age / Sex:	29 Years / Female	OPD No.:	OPD-88304
Father's/Husband's Name:	D/o Ramesh Joshi (fictional)	Date of Visit:	10-Aug-2026
Address:	12, Green Park Society, Nashik	Contact No.:	+91-97XXXXXX45 (fictional)
Consultant:	Dr. Anjali Rane, MD (Medicine) (fictional)	Department:	General Medicine

Chief Complaints

Fictional patient presents with complaints of burning micturition and lower abdominal pain for 2 days.

History of Present Illness

Synthetic narrative for demonstration purposes. The (fictional) patient reports increased urinary frequency, burning sensation during urination, and mild lower abdominal discomfort for the past 2 days. No fever, no flank pain, no hematuria. No similar complaints in the past. Denies pregnancy.

Past History

- No known case of Diabetes Mellitus or Hypertension (fictional record)
- No previous hospitalization or surgery
- One prior episode of urinary tract infection 2 years ago, treated and resolved (fictional)

Personal / Family History

- Non-smoker, non-alcoholic (fictional)
- No significant family history of chronic illness reported

General & Vital Examination

Temp	Pulse	BP	RR	SpO2
98.8°F	78 /min	110/72 mmHg	16 /min	99% RA

General condition fair, patient conscious and oriented. No pallor, no icterus, no pedal edema. Abdomen: soft, mild suprapubic tenderness, no guarding or rigidity. No costovertebral angle tenderness (all findings fictional).

Investigations Advised / Reported (synthetic values)

Test	Result	Reference Range
Hemoglobin	12.4 g/dL	12.0 - 15.5
Total WBC Count	10,200 /cmm	4,000 - 11,000
Urine Routine	Pus cells 15-20/hpf, occasional RBC	< 5 pus cells/hpf
Urine Culture	E. coli, sensitive to Nitrofurantoin	—
Blood Sugar (Random)	96 mg/dL	70 - 140

Provisional Diagnosis

Acute uncomplicated urinary tract infection (fictional / synthetic diagnosis).

Treatment / Prescription (Rx)

- Tab. Nitrofurantoin 100 mg — 1 tablet twice daily after food, for 5 days (synthetic)
- Tab. Paracetamol 650 mg — as needed for discomfort, max 3 times daily
- Increased oral fluid intake advised (2.5-3 litres/day)

Advice

- Review after 5 days with urine culture report
- Maintain good perineal hygiene
- Report immediately if fever, flank pain, or blood in urine develops
